-!- FUNCTION: BOTULINUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER RELEASE. IT BINDS TO PERIPHERAL NEURONAL SYNAPSES. IS INTERNALIZED AND MOVES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ENDOPERPIDASE.

CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobravins, SNAP25 or syntaxin. No detected action on small molecule substrates.

COPACTOR: Binds 1 zinc ion per subunit (By similarity).

SUBUNIT: Disulfide-linked heterodimer of a light chain (L) and a heavy chain (H). The light chain has the pharmacological activity, while the N- and C-terminal of the heavy chain mediate channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STRAIN=BL6340;

-!- SUBCELLULAR LOCATION: Secreted.
-!- MISCELLANEOUS: There seeven antigenically distinct forms botulinum neurotoxin: Types A, B, Cl, D, E, F, and G.
-!- SIMILARITY: Belongs to peptidase family M27.
                                                                                                                                                                                                                                                                                                                Clostridium butyricum.
Bacteria; Firmicutes; Clostridia; Clostridiales; Clostridiaceae;
Clostridium.

potulinum types A, B, and F: evidence of chimeric sequences in the gene encoding the nontoxic nonhemagglutinin component.";

I. 1. 5. Syst. Bacteriol. 46:1105-112(1996)

I. 1. FUNCTION: Inhibits acetylcholine release. The botulinum toxin binds with high affinity to peripheral neuronal presynaptic membrane, is then internalized by receptor-mediated andocytosis.

The C-terminus of the heavy chain (H) is responsible for the adherence of the toxin to the cell surface while the N-terminus and the cytosol. After transported the light chain (E) hydrolyzes the 197-Gln-[-Arg-198 bond in SNAP-25, thereby blocking neurotransmitter release. Inhibition of acetylcholine release results in flaccid paralysis, with frequent heart or respiratory failure (By similarity).

C. -CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the neurotrosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.

C. SUBUNIT: Disulfide-linked heterodimer of a light chain (L) and a heavy chain (H) (By similarity).

C. HISCELLANBOUS: There are seven antigenically distinct forms of control of the control of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. RELEASE 19818(1993).

C. 1- GAPLINUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER

RELEASE. IT BINDS TO PERIPHERAL NEURONAL SYNAPSES, IS INTERNALIZED

AND MOVES BY RETROCRADE TRANSFORT UP THE AXON INTO THE SPINAL CORD

WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT

INTIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC

RNDOPEPTIDASE THAT CLEAVES SYNTAXIN.

C. CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.

C. CATALYTIC ACTIVITY: Limited hydrolysis of proteins of the neuroexocytosis apparatus, synaptobrevins, SNAP25 or syntaxin. No detected action on small molecule substrates.

C. I. SUBUNIT: Disulfide-linked heterodimer of a light chain (H) The light chain has the pharmacological activity, while the N- and C-terminal of the heavy chain mediate channel formation and toxin binding, respectively.

C. I. SUBCELLANBOUS: There are seven antigenically distinct forms of botulinum neurotoxin: Types A, B, Cl, D, E, F, and G.

C. I. MISCELLANBOUS: BOTULINUM WHICH CARRY THE APPROPRIATE PARTER P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .

Sequence 33, Application US/08446692
Patent No. 575951
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Zamb, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSEE: Maria C.H. Lin
STREET: 345 Park Avenue
CITY: New York
STREET: No York

FEATURE:
OTHER INFORMATION: Chimeric peptide made up of amino acid sequence 288-302 of the OTHER INFORMATION: asels virus fusion protein, F linked by a spacer peptide to aminother information: acid sequence 2-10 of the GnRH hormone
NAME/KEY: MOD_RES
LOCATION: (1) ... (1)
OTHER INFORMATION: Amidated Lysine
NAME/KEY: PEPTIDE
LOCATION: (1) ... (15)
OTHER INFORMATION: measles virus fusion protein, F
NAME/KEY: PEPTIDE
LOCATION: (19) ... (22)
OTHER INFORMATION: Spacer peptide
LOCATION: (23) ... (31)
OTHER INFORMATION: Peptide corresponds to amino acid sequences 2-10 of the human oTHER INFORMATION: Peptide corresponds to amino acid sequences 2-10 of the human oTHER INFORMATION: GNRH hormone
NAME/KEY: MOD_RES
LOCATION: (33) ... (31)
OTHER INFORMATION: GNRH hormone

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description

Sequence 33, Application US/09847102A

Publication No. US20330044409A1

GENERAL INFORMATION:

APPLICANT: Carson, Dennis A.

APPLICANT: Carson, Dennis A.

APPLICANT: Corr, Maripat

APPLICANT: Rhee, Chae-Seo

APPLICANT: Rhee, Chae-Seo

APPLICANT: Malini, Seo

TITLE OF INVENTION: INMUNOLOGIC COMPOSITIONS AND METHODS FOR

TITLE OF INVENTION: STUDYING AND TREATING CANCERS EXPRESSING FRIZZLED ANTIGENS

TITLE OF INVENTION: STUDYING AND TREATING CANCERS EXPRESSING FRIZZLED ANTIGENS

TITLE OF INVENTION: DATE: 2001-05-01

CURRENT APPLICATION NUMBER: US/09/847,102A

CURRENT PILING DATE: 2001-05-01

NUMBER OF SEQ ID NOS: 138

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 33

LENGTH: 75
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 9, Application US/10355161A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PRETURE:
ORGANISM: Affilicial Sequence
FEBTURE:
OTHER INFORMATION: Chimeric peptide consisting of amino acid sequence 1-10 of the GR
OTHER INFORMATION: the Measles virus protein F linked by a spacer to amino acid sequence 288-302 of
OTHER INFORMATION: the Measles virus protein F linked by a spacer to amino acid sequence 288-302 of
OTHER INFORMATION: the Measles virus protein F linked by a spacer to amino acid sequence 1.10 of the GRH hormone
NAME/KEY: MOD_RES
LOCATION: (4.7)...(4.7)
OTHER INFORMATION: Amidated-glycine or glycinamide
NAME/KEY: PREPTIDE
LOCATION: (1)...(10)
OTHER INFORMATION: Amino acid sequence 1-10 of the human GRH hormone
NAME/KEY: PEPTIDE
LOCATION: (1)...(18)
OTHER INFORMATION: Spacer peptide
NAME/KEY: PEPTIDE
LOCATION: (29)...(34)
OTHER INFORMATION: Amino acid sequence 288-302 of the Measles virus fusion protein,
NAME/KEY: PEPTIDE
LOCATION: (35)...(34)
OTHER INFORMATION: Spacer peptide
NAME/KEY: PEPTIDE
LOCATION: (39)...(34)
OTHER INFORMATION: Amino acid sequence 2-10 of the human GRH hormone
NAME/KEY: PEPTIDE
LOCATION: (39)...(47)
OTHER INFORMATION: Amino acid sequence 2-10 of the human GRH hormone

Application US/09848834A

Patent No. US20020076416A1

GENERAL INFORMATION:
APPLICANT: Aphton Corporation
TITLE OF INVENTION: Chimeric Peptide Immunogens
FILE REPERENCE: 1102865-004

FURBENT APPLICATION NUMBER: US/09/848,834A

CURRENT FILING DATE: 2001-05-04

PRIOR APPLICATION NUMBER: 05/02/328

NUMBER OF SEQ ID NOS: 20

SOFTWARE: Patentin Version 3.0

cell fusion glycoprotein precursor - rinderpest virus (strain L)
N;Contains: fusion glycoprotein F1; fusion glycoprotein F2
C;Species: rinderpest virus
C;Date: 30-Sep-1989 #sequence_revision 30-Sep-1989 #text_change 16-Jul-1999
C;Accession: A28921
R;Tsukiyama, K.; Yoshikawa, Y.; Yamanouchi, K.
Virology 164, 523-530, 1988
A;Title: Fusion glycoprotein (F) of rinderpest virus: entire nucleotide sequence of th
                                                                                                                                                                                   C)Species: porpoise morbillivirus
C)Date: 19-Mar-1997 #sequence_revision 19-Mar-1997 #text_change 24-Nov-1999
C,Accession: 837034 #sequence_revision 19-Mar-1997 #text_change 24-Nov-1999
C,Accession: 837034 #sequence No. 1994 #s. Wishaupt, R.G.A.; Welsh, M.J.;
Submitted to the EMBL Data Library, July 1994
A,Description: Nucleotide sequence comparisons of the F and M genes of cetacean morbil
A,Reference number: 847034
                                                                                                                                                                                                                                                                                                                                                                                                                  A,Accession: 847034
A,Molecule type: mENA

cell fusion glycoprotein precursor - phocine distemper virus
N;Contains: fusion protein F1; fusion protein F2
C;Species: phocine distemper virus
C;Species: phocine distemper virus
C;Date: 30-Sep-1992 #sequence_revision 30-Sep-1992 #text_change 25-Oct-1996
C;Accession: 00:368
R;Koevamees, J.; Blixenkrone-Moeller, M.; Sharma, B.; Oervell, C.; Norrby, E.
A;Gen: Virol. 72, 259-2966, 1991
A;Title: The nucleotide sequence and deduced amino acid composition of the haemagglutin A;Reference number: 00:368; MUID:92113538; PMID:1765768
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                C.Accession: A48346

                                                                                                                                                                                                                      ö
                                      The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as lutainising hormone releasing hormone, LHRHN) comprising a fusion peptide which comprises a promiscuous helper T-cell spetide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertorphy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention
                                                                                                                                                                                                                                                                                                                                                                                                  Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GREH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiseuous helper T-cell peptide epitope and useful inducing an immune response against GREH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), prostate cancer. The immunogen is effective in eliciting high and specific anti-GREH antibody titres. The present sequence is a synthetic immunogen of the invention
                                                                                                                                                          Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope

Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxia T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yershina. Spacer amino acid sequence from the invasin protein of Yershina. Spacer amino acid comains and between the immune stimulator and hapten components. When the containing, invasin-free immunogenic peptide as a above which can be used as a potent vaccine for treating e.g. prostatic hyperplasia, androgence for treating e.g. prostatic hyperplasia, androgence dependent carcinoma, prostatic carcinoma, testicular carcinoma, cyste, (severe) premenstrual syndrome or ostrogen-dependent breast cancer, or for induction of infertility. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  76...30 "measles virus F protein helper T cell epitope" 733...42 //note= "LHRH hapten"

Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing 5 cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide c sequence from the invasin protein of Yersinia. Spacer amino acid c sequence from the invasin protein of Yersinia. Spacer amino acid c sequence from the immune stimulator and hapten components. When the chapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component. The present sequence represents an LHRH-containing, invasin-free immunogenic peptide as above which can be used as a potent vaccine for treating e.g. protatic hyperplasia, androgence endometriosis, benign uterine tumours, recurrent functional ovarian cysts, (severe) premenstrual syndrome or oestrogen-dependent breast cancer, or for induction of infertility. Synthetic immunogenic peptides are provided in which a universal immune slimulator is linked to a peptide or protein hapten containing B cell and cor cytotoxic T lymphocyte epitopes, giving a product which causes operent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous halper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide captured from the invasin protein of Yershina. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component sequence represents an LHRH-containing, invasin-free immunogenic peptide as above which can be used as a potent vaccine for treating e.g. prostatic hyperplasia, androgendence arcinoma, prostatic carcinoma, testicular carcinoma, and cysts, (severe) premenstrual syndrome or oestrogen-dependent breast cancer, or for induction of infertility. This sequence is particularly preferred. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Measles virus Unidentified.

```
The present sequence represents a peptide immunogen comprising a helper T cell (Th) epitope of the F protein of the Measles virus and a target antigen, luteinising hormone-releasing hormone (LHRH). The peptide immunogens cause induction of a specific immune response to LHRH which is involved in regulation of spermatogenesis, ovulation, oestrus, sexual development and secretion of sex hormones. Provision of a promiscuous T provides optione (which is functional in genetically diverse subjects) provides optione immunogenicity to the B cell epitopes of the target antigen and thus high antibody titres against the target antigen. The peptide immunogens of the invention are used to vaccinate against mammalian LHRH, for use as (the reversible) contraceptive, control of hormone -dependent tumours (cancer of prostate or breast, also endometriosis); to prevent boar taint (and improve meat quality) and for immunocastration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Promiscuous T-cell epitope; measles virus F protein; MVF; hepatitis B virus surface antigen; HBV; immunogenic; B-cell epitope; luteinising hormone releasing hormone; LHRH; contraceptive; anticancer; somatostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoglobulin B; IGB; anti-allergic; plasmodium falciparum; circumsporozoite; antimalarial; CETP; cholesteryl ester transport protein; anti-arteriosclerotic.

New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus.

Example 1; Page 77; 129pp; English.

The invention relates to novel promiscuous T helper cell epitopes (Th), and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The Th epitopes and peptide immunogenic containing them. Are used to induce a T helper cell response, containing them. Are used to induce a T helper cell response, containing them. Are used to induce a T helper cell response, containing them. The phicopes induced and or immunogenic peptides or HIV epitopes. But move generally against any pathogen, immunotenic limits them. The phicopes and containing them. The The epitopes and containing them are used for prevention and/or treatment of infunctions (HIV foot-and-mouth disease or malaria); for canetr call and peptides and the contraception, treatment of hormone (LHRH) for contraception, treatment of hormone call and peptides and peptides are acting the meat, and immunocastration) are represented a promocastration of animals or for treating libraries or created as incomparation of a promiscuous The Hilper epitope. Testing the production of animals or for treating the produces a subjects into an immunogen improves capacity or production of animals of animals or for treating to product canners and pathogen-derived Thelper epitopes. Sequence AAV91122-Y91142, AAV91226 and AAV91245-Y91246 and AAV91245-Y91246 animal and sequences AAV91122-Y91142, AAV91226 and AAV91245-Y91246 animal and sequences AAV91122-Y91144, AAV9126 and AAV91245-Y91246 animal an

Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or syrbtoxaxt Tlymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator respensents an LHRH-
                                                                                                                                                                                                                                                                                                                                                                                                                                                             19. .33

The present sequence is that of a synthetic immunogenic peptide derived from human LHFH. This is an example of peptides that can be used in claimed immunostimulatory complexes of the invention that are specifically adapted to act as advant and as peptide immunogen stabiliser. The complexes comprise a CpG oligonucleotide and a biologically active peptide immunogen. The complex is particulate and can efficiently present peptide immunogen. The complex is particulate and contropoduce an immune response. The complexes may be prepared with various for produce an immune system to produce an immune size of the microparticle. An immunostimulatory complex comprising the present LHRH derived peptide can be used in a vaccine for prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LHRH peptide used in immunostimulant complex for prostate cancer vaccine.
containing immunogenic peptide as above which can be used as a potent vaccine for treating e.g. prostatic hyperplasia, androgen-dependent carcinoma, prostatic carcinoma, testicular carcinoma, endometriosis, benign uterine tumours, recurrent functional ovarian cysts, (severe) premenstrual syndrome or osstrogen-dependent breast cancer, or for induction of infertility. (Updated on 25-MAR-2003 to correct PN field.)

The invention relates to novel promiscuous T helper cell epitopes (Th), and immunogenic peptides comprising the Th epitopes of the invention and immunogenic peptides comprising the Th epitopes of the invention and peptide immunogens containing them, are used to induce a T helper cell response, protein (ETFP) or HIV epitopes, but more generally against any pathogen, immunoreactive self-antigen or tunour antigen. The Th epitopes and peptide immunogens may be used for prevention and/or treatment of infections (HIRW) for contraception, treatment of hormone releasing hormone (LHRM) for ontraception, treatment of hormone releasing hormone (LHRM) for ontraception, treatment of hormone releasing hormone and provents of an immunogens improves capacity to arreriosclerosis. Incorporation of a promiscuous Th (functional in production of antibodies against a target antigen. Th can replace carrier production of antibodies against a target antigen. Th can replace carrier protein and sequences AAY91122-Y91142, AAY91226 and AAY91245-Y91246 represents a promiscuous Thelper epitope from the meaales virus (MVF) protein and sequences AAY91144-Y91155 are synthetic epitopes auriace antigen, and sequences AAY91144-Y91155 are synthetic epitopes derived from this HBV epitope. AAY91156-Y91196, AAY91277 and AAY9124-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus.
                                                                                                                                                                                                                                                                                                                       Promiscuous T-cell epitope, measles virus F protein; MVF; hepatitis B Virus surface antigon; HBV; immunogenic; B-cell epitope; luteinising hormone releasing hormone; LHRH; contraceptive; anticancer; somatostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoglobulin B; IgB; anti-allergic; plasmodium falciparum; circumsporcozoite; antimalarial; CETP; cholesteryl ester transport protein; anti-arteriosclerotic.
                                                                                                                                                                                                                                                                                Modified MVF Th epitope/LHRH antigenic peptide, SEQ ID NO:43.

CC promiscuous Th epitope. AAY91197 is the LHRH target antigenic peptide promiscuous Th epitope. AAY91197 is the LHRH target antigenic peptide target antigenic peptides. AAY91200 is sometostatin, and these LHRH antigenic peptides. AAY91201 sometostatin, and the epitope. Sometostatin immunogens may be used to promote growth in the princip of the prevent HV infection of T cells. AAY90212 is a modified with the pitope/CD4 CDR2 antigenic peptides which may be used to prevent HV infection of T cells. AAY90212 is a modified version of a human IgE (immunoglobulin E) CH3 domain, and AAY90213-Y90219 are Th epitope/GPG CH3 antigenic peptides which may be used in the creatment of allergies. AAY91220 is a peptide derived from foot and mouth disease virus (FMDV) VPI capsid protein and AAY91221-Y9122 comprise this corrumsporcacite (CS) target antigen, and AAY91221-Y91225 comprise the CS antigen and an MVF Th epitope and may be used in a malaria vaccine. AAY91221 represent CETP-derived peptides and AAY91223-Y91241 are immunogens comprising a CETP-derived peptides and AAY91224-Y91240 are immunogens comprising a CETP-perived peptides and AAY91224-Y91240 are immunogens comprising a CETP-derived peptides and AAY91229-Y91241 are conformed to treat arteriosclerosis and cardiovascular disease. AAY91240-Y91251 are antigenic peptides comprising MVH Th and CY91251 and AAY91258-Y91273 are antigenic peptides comprising MVH Th and CC Y91251 and AAY91258-Y91273 are antigenic peptides comprising MVH Th and CC HIV-1 B-cell epitope which may be used as a component in an anti-HV-1 convection epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the antigenic peptides of the invention. (Updated on 12-SEP-2003 to standardise OS field)

New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus.

Example 1; Page 84; 129pp; English

The invention relates to novel promiscuous T helper cell epitopes (Th),
along with B cell epitopes. The Th epitopes and peptide immunogenic peptides comprising the The epitopes and peptide immunogenic peptides. The Th epitopes and peptide immunogenic pecifically against Planmachium falciparum, cholesteryl ester transport containing them, are used to induce a T helper cell response, specifically against Planmachium falciparum, cholesteryl ester transport correlating telminogens may be used for prevention and/or treatment of infections [HIV] foot-an-mouth disease or malaria); for cancer immunotent prevention of the action of lutefinisting hormone infections [HIV] foot-and-mouth disease or malaria); for cancer immunotent prevention of promiserous The functional in the contraception, treatment of hormone (LHM) for contraception, treatment of hormone infections [HIV] foot-and-mouth disease or malaria); for cancer relations of promiserous Theorems and performed and action of lutefinishing hormone corrections and sequenced prevent of animals; or for treating allergies or recipied diverse subjects) into an immunogen improves capacity to production of antibodies against a target antidem. The canterioral progress are promiserous a promiserous and pathogened derived T helper cell mediated manual sequence any production of antibodies against a target antidem. The canterior profuser of antibodies against a large antidem. The canterior corresponds and Advised *Yavist (HWY) process and performed and sequence Advised to product on an action of antibodies against a large antidem. Advised and Advised *Yavist (HWY) process antigent opptides comprising sometostatin and sequence Advised *Advised *Advised

contrared to prevent HIV infection of T cells and AA New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis Example 1; Page 79; 129pp; English antigenic site, for immunization e or human immune deficiency virus.

```
Ä
disease virus (FMDV) VP1 capsid protein and AAV91221-Y91222 comprise this peptide and a Th epitope. AAY9123 is a plasmodium falciparum circumsporzocite (CS) target antigen, and AAAV91225 comprise the CS antigen and an WVF Th epitope and may be used in a malaria vaccine. AAV91228-Y91231 represent CETP-derived peptides and AAY91232-Y91241 are immunogens comprising a CTP peptide and a Th epitope which may be used to prevent or treat arteriosclerosis and cardiovascular disease. AAY91247 and AAY91252-Y91257 are HIV-1 neutralising B-cell epitopes, and AAY91248-Y91251 are antigenic peptides comprising MVH Th and HIV-1 B-cell epitope which may be used as a component in an anti-HIV-1 vaccine. AAY91199 and AAY91199 are respectively an immunostimulatory invasin protein epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the antigenic peptides of the invention. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hepatitis B virus surface antigen; HBV; immunogenic; B-cell epitope; luteinising hormone releasing hormone; LHRH; contraceptive; anticancer; somatcostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoglobulin E; IGE; anti-allergic; plasmodium falcipatum; circumsporozoite; antimalarial; CETP; cholesteryl ester transport protein; anti-arteriosclerotic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel promiscuous T helper cell epitopes (Th) and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The Th epitopes and peptide immunogens containing them, are used to induce a T helper cell response,

Peptide immunogen comprising a Th epitope and LHRH target antigen.

Helper T cell epitope; F protein; Measles virus; peptide immunogen; LHRH; luteinising hormone-releasing hormone; spermatogenesis; ovulation; oestrus; sexual development; sex hormone; promiscuous T helper epitope; vectine; contraceptive; hormone-dependent tumour; prostate cancer; breast cancer; endometriosis; boar taint; meat quality; invasin domain; immunocastration.

The present sequence represents a peptide immunogen comprising an invasin domain immunostimulatory peptide of Yersinia sp., a synthetic helper T cell (Th) epitope and a target antigen, luteinising hormone-releasing hormone (LHRH). The synthetic Th epitope is derived from a structured synthetic antigen library (SSAL) designated SSAL1 Thl is synthetic antigen library (SSAL) designated SSAL1 Thl is shouthet a promiscouse epitope taken from the Protein of the Measles virus. The peptide immunogens cause induction of a specific immune response to IHRH which is involved in regulation of specific immunogens, ovulation, oserrus, sexual development and secretion of spermatogenesis, ovulation, oserrus, sexual development and secretion of sex hormones. Provision of a promiscuous T helper epitope (which is immunogenicity to the B cell epitopes of the target antigen and thus high antibody titres against the target antigen. The peptide immunogens of the invention are used to vaccinate against mammalian LHRH, for use as (reversible) contraceptive; control of hormone-dependent tumours (cancer of prostate or breast, also endometriosis), to prevent boar taint (and improve meat quality) and for immunocastration New peptide immunogen containing luteinizing hormone-releasing hormone antigen site and helper T cell epitope, for e.g. contraception and treatment of cancer. 36. .45 /note= "LHRH antigenic epitope AAY68566" . .16 note= "invasin domain AAY68565" Location/Qualifiers Claim 9; Page 71; 102pp; English. 34. .35 /note= "spacer" "spacer" (UNBI-) UNITED BIOMEDICAL INC 98US-00100414. 99WO-US013960. 17. .18 /note= WPI; 2000-160562/14. New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus.

Example 1; Page 80; 129pp; English

The invention relates to novel promiscuous T helper cell epitopes (Th),
and immunogenic peptides comprising the Th epitopes of the invention
and immunogenic peptides comprising the Th epitopes of the invention
and immunogenic peptides. The The pitopes and peptide immunogens
containing them, are used to induce a Thelper cell response,
containing them, are used to induce a Thelper cell response,
containing them, are used to induce a Thelper cell response,
containing them, are used to prevention and/or treatment of
immunocactive self-antigen or tumour antigen. The Th epitopes and
immunocactive self-antigen or tumour antigen. The Th epitopes and
confections (HIV) foot-and-mouth disease or malaria); for cancer
immunotherapy; for inhibition of the action of luteinising hormone
releasing hormone (LHRH) for contraception, treatment of hormone
releasing hormone (LHRH) for contraception, treatment of hormone
releasing hormone (LHRH) for contraception, treatment of hormone
contractions (HIV) for inhibition of boar taint in meat, and immunocastration)
carteriosclerosis. Inocropration of a promiscuous Th (functional in

contraction of antibodies against a target antigen. The market (HIV)
contraction of antibodies against a target antigen. Fortunes
contraction and sequences ANY91122-Y91142, ANY91225 and AAY91245
corpresents a promiscuous Th epitope from the measles virus (MIV)
corpresents antigenic applicate (THRH target antigenic peptides
corpresent synthetic The Publication of ANY912012 and ANY912012
corpresents antigenic peptides comprising an LHRH sequence joined to a promiscuous Th epitope. AAY91201 as antigenic peptides comprising an LHRH sequence joined to a human IgE (Immunoglobulin E) Gals domain antigenic antigenic peptides of a human

peptide and a Th epitope. AAY91223 is a Plasmodium falciparum circumsporzotice (CS) target antigen, and AAAY91224-491225 comprise the CS antigen and an AAY91225 comprise the CS antigen and an MVF Th epitope and may be used in a malaria vaccine. AAY91228-Y91231 represent CETP-derived peptides and AAY91232-Y91241 are immunogens comprising a CETP peptide and a Th epitope which may be used to prevent or treat arteriosclerosis and cardiovascular disease. AAY9124 and AAY9125-Y91257 are HIV-1 neutralising B-cell epitopes, and AAY91248-Y91251 are antigenic peptides comprising WVH Th and HIV-1 B-cell epitope which may be used as a component in an anti-HIV-1 vaccine. AAY91199 and AAY91199 are respectively an immunostimulatory both of which may optionally be used in the antigenic peptides spacer peptide, both of which may optionally be used in the antigenic peptides of the invention. ORGANISM: Artificial Sequence
ORGANISM: Artificial Sequence
ORGANISM: Artificial Sequence
ORGANISM:
PEATURE
OTHER INFORMATION: Chimeric peptide consisting of amino acid sequence 1-10 of the C
OTHER INFORMATION: RH hormone linked by a spacer to amino acid sequence 288-302 of
OTHER INFORMATION: Hhormone linked by a spacer to amino acid sequence 288-302 of
OCHER INFORMATION: Amino acid sequence 1-10 of the human GnRH hormone
NAME/KEY: PEPTIDE
OCHER INFORMATION: Spacer peptide
NAME/KEY: PEPTIDE
OCHER INFORMATION: Spacer peptide
OTHER INFORMATION: Amino acid sequence 288-302 of the Measles
OTHER INFORMATION: Amino acid sequence 288-302 of the Measles
OTHER INFORMATION: Virus fusion protein, F
OCHER INFORMATION: Virus fusion protein, F
OCHER INFORMATION: No VIRUS
OTHER INFORMATION: No VIRUS FRES

Patent No. US20020076416A1

GENERAL INPORMATION:

APPLICANT: Aphton Corporation

TITLE OF INVENTION: Chimeric Peptide Immunogens
FILE REFERENCE: 1102865-004

FURRENT APPLICATION NUMBER: US/09/848,834A

CURRENT FILING DATE: 2001-05-04

PRIOR PILING DATE: 2000-05-05

NUMBER OF SEQ ID NOS: 20

SEQ ID NOS: 20

SEQ ID NOS: 20

LENGTH: 51

Publication No. US2030152921A1

GENERAL INPORMATION:

APPLICANT: Dougueleret, Lydie

APPLICANT: Doubert, Severin

APPLICANT: Bougueleret, Lydie

APPLICANT: Dobert, Severin

TILE OF INVEXTION: FULL-LENGTH HUMAN CDNAS ENCODING POTENTIALLY SECRETED PROTEINS

FILE REFERENCE: 78.US4.CIP

CURRENT APPLICATION NUMBER: US/0976,997

CURRENT FILING DATE: 2000-12-07

PRIOR FILING DATE: 2000-12-07

PRIOR FILING DATE: 1999-12-08

NUMBER OF SEQ ID NOS: 482

Stevens VC; Ď, Michaeli Grimes S,

WPI; 2002-049440/06.

Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analog.

Claim 10; Page 6; 43pp; English.

The invention relates to a synthetic immunogen for inducing specific antibodies against gonadorropin releasing hormone (GRMH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiseuous helper T-cell peptide epitope and immunose helper T-cell peptide epitope and immunose response against GRMH in an animal subject, and as such is useful inducing as contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer),

The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometricais, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GrRH antibody titres. The present sequence is a synthetic spacer peptide used in the immunogen of the invention
                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analog.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GRRH also known as lutainising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GRRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GRRH antibody titres. The present sequence is a synthetic immunogen of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analog.
                                                                                                                                                                                                                              Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a synthetic immunogen for inducing specific antibodies against gonadorropin releasing hormone (GnRH also known as lutelinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel synthetic immunogen for inducing immune response against pronadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analog.
                                                                                                                                                                                                                                                                                    Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GRBH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is
prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention
                                                                                                                                                                                                                                                                                                                                                                                      Gonadotrophin releasing hormone; GnPH; synthetic immunogen;

useful inducing an immune response against GRRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GRRH antibody titres. The present sequence is a synthetic immunogen of the invention

antibodies against gonadotropin releasing hormone (GnRH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promisectuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                 Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as futerinishing hormone releasing hormone, LiBHP) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention
                                                                                                                                                                                                                                                                                                                                    Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                             The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as fluteinishing hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometricals, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention
                                                                                  Novel synthetic immunogen for inducing immune response against
gonadotropin releasing hormone, comprises fusion peptide having
promiscuous helper T-cell peptide epitope and immunomimic peptide epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gonadotrophin releasing hormone; GnPH; synthetic immunogen;

The present sequence is a polypeptide encoded by one of a large number of s. ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dr primed cDNA libraries. Such ESTs are not well suited for isolating cDNA perimed cDNA libraries show been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. S' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                            New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gonadotrophin releasing hormone; GnRH; synthetic immunogen; luteinising hormone releasing hormons; LHRH; contraceptive; promiscuous helper T-cell peptide epitope; immunomimic peptide epitop breast cancer; uterine cancer; gynaecological cancer; endometriosis; uterine ancer; synaecological cancer; endometriosis; uterine fibroid; benign prostatic hypertrophy; prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as luteinishing hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analog.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping.

The present invention relates to human single exon nuclear acts frows. (GENP: see AAI106B-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequence
                                                                                                                                                                                                                                                                                                                                                                                                                 Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; foetal liver; gene expression; single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptide #4701 encoded by human foetal liver single exon probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Match 100.0%; Score 29; DB 4; L Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a synthetic immunogen for inducing specific antibodies against gonadorropin releasing hormone (GnRH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analog.

                                                                                                                                                      셤
                                                                                                                                      ઠ
                                                                                                                                                                                                                                                                   ô
                                                                                                                                   The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human bone marrow.
                                                                                    Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver.

The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to anucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic antilammatory diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              measuring gene expression in
